(a) PLD
Context Matching
depth m
$B = m$
breaks at 1st mismatch
(b) EAGLE-2
Trained Draft + Pruning
B = adaptive
needs trained head
(c) Sequoia
Isotropic (uniform p)
$B = k^d$
optimal for uniform p
(d) Goose (ours)
Anisotropic ($p_s >> p_t$)
spine p_s
continuation
$w_i \propto \frac{1}{i}$
$B = m + \sum w_i$
linear spine + bounded branches
high p_s
low p_t
uniform
pruned
